# Global Harm Reduction

- Observation-based validation of protocols on nursing units.
  - Leaders round to validate care bundles are followed.
  - EPIC reports assist.
- Weekly HAI review
  - Unit leader investigates infection and reports findings at the review meeting. If the stratification factor is modifiable, the unit leader reports on actions taken at the following week's meeting. Review meeting includes provider engagement.
- Swarm analysis as an input into HAI collaboratives.
- Multidisciplinary collaborative structure that utilizes PDSA cycles and data to improve processes and outcomes.
