

CMS Age Friendly Structural Measure

A Commitment to What Matters for the Older Adult

- KHA Quality Webinar
- September 16, 2024

Centers for Medicare & Medicaid Services (CMS) Final Rule

Age Friendly Structural Measure

Begins: CY 2025 reporting period / FY 2027 payment determination

Medicare Hospital Inpatient Quality Reporting (IQR) Program

Published: Federal Register 08/28/2024

<https://federalregister.gov/d/2024-17021>

<https://govinfo.gov>

Age Friendly Structural Measure

Per CMS

- A pay for reporting program - no outcome measures currently exist
- Provide hospitals flexibility - without being overly prescriptive
- (Future) CMS educational & training materials to support hospitals
 - Vendors
 - QIOs
 - QualityNet website notices
 - Memos & emails

CMS Age Friendly Structural Measure

Assesses hospital commitment to improving care for **patients ≥65**

...in the hospital, OR, & ED

CMS Age Friendly Structural Measure

Table IX.C.1

<p>Domain 1: Eliciting Patient Healthcare Goals This domain focuses on obtaining patient's health related goals and treatment preferences which will inform shared decision making and goal concordant care.</p>	<p>(A) Established protocols are in place to ensure patient goals related to healthcare (health goals, treatment goals, living wills, identification of healthcare proxies, advance care planning) are obtained/reviewed and documented in the medical record. These goals are updated before major procedures and upon significant changes in clinical status.</p>
<p>Domain 2: Responsible Medication Management This domain aims to optimize medication management through monitoring of the pharmacological record for drugs that may be considered inappropriate in older adults due to increased risk of harm.</p>	<p>(A) Medications are reviewed for the purpose of identifying potentially inappropriate medications (PIMs) for older adults as defined by standard evidence-based guidelines, criteria, or protocols. Review should be undertaken upon admission, before major procedures, and/or upon significant changes in clinical status. Once identified, PIMS should be considered for discontinuation, and/or dose adjustment as indicated.</p>
<p>Domain 3: Frailty Screening and Intervention This domain aims to screen patients for geriatric issues related to frailty including cognitive impairment/delirium, physical function/mobility, and malnutrition for the purpose of early detection and intervention where appropriate.</p>	<p>(A) Patients are screened for risks regarding mentation, mobility, and malnutrition using validated instruments ideally upon admission, before major procedures, and/or upon significant changes in clinical status. (B) Positive screens result in management plans including but not limited to minimizing delirium risks, encouraging early mobility, and implementing nutrition plans where appropriate. These plans should be included in discharge instructions and communicated to post-discharge facilities. (C) Data are collected on the rate of falls, decubitus ulcers, and 30-day readmission for patients > 65. These data are stratified by demographic and/or social factors. (D) Protocols exist to reduce the risk of emergency department delirium by reducing length of emergency department stay with a goal of transferring a targeted percentage of older patients out of the emergency department within 8 hours of arrival and/or within 3 hours of the decision to admit.</p>
<p>Domain 4: Social Vulnerability This domain seeks to ensure that hospitals recognize the importance of social vulnerability screening of older adults and have systems in place to ensure that social issues are identified and addressed as part of the care plan.</p>	<p>(A) Older adults are screened for geriatric specific social vulnerability including social isolation, economic insecurity, limited access to healthcare, caregiver stress, and elder abuse to identify those who may benefit from care plan modification. The assessments are performed on admission and again prior to discharge. (B) Positive screens for social vulnerability (including those that identify patients at risk of mistreatment) are addressed through intervention strategies. These strategies should include appropriate referrals and resources for patients upon discharge.</p>
<p>Domain 5: Age-Friendly Care Leadership This domain seeks to ensure consistent quality of care for older adults through the identification of an age friendly champion and/or interprofessional committee tasked with ensuring compliance with all components of this measure.</p>	<p>(A) Our hospital designates a point person and/or interprofessional committee to specifically ensure age friendly care issues are prioritized, including those within this measure. This individual or committee oversees such things as quality related to older patients, identifies opportunities to provide education to staff, and updates hospital leadership on needs related to providing age friendly care. (B) Our hospital compiles quality data related to the Age Friendly Hospital measure. These data are stratified by demographic and/or social factors and should be used to drive improvement cycles.</p>

CMS Age Friendly Structural Measure

Ensure hospitals reliably implement the 4Ms

A Holistic Bundle

Thus providing evidence-based elements of high-quality care for all older adults

4Ms Driver Diagram

Age-Friendly Health Systems

4Ms

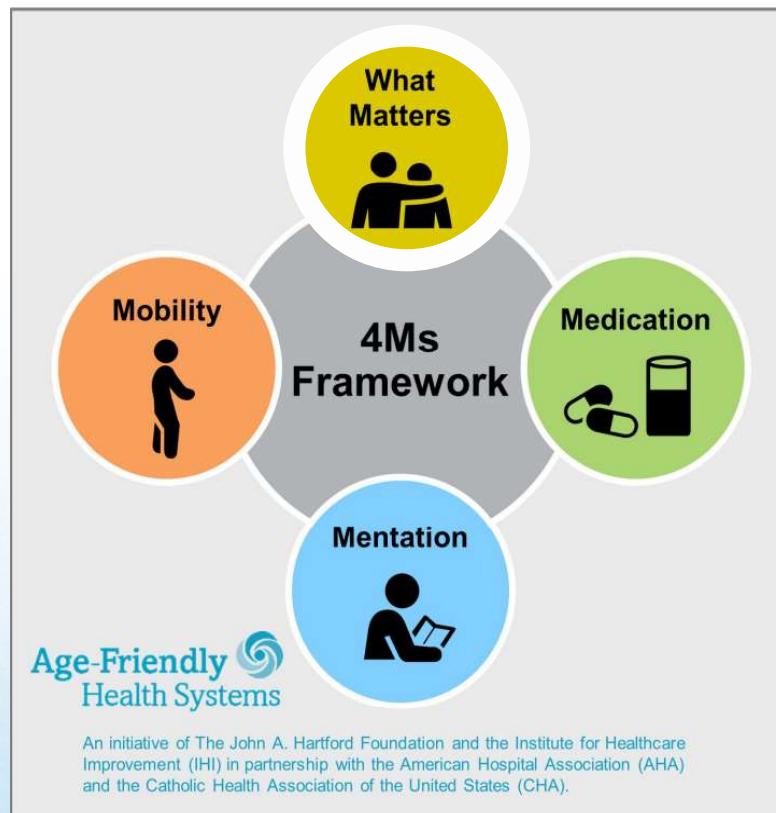

- What Matters
- Medication
- Mentation
- Mobility

Assess

Know about the **4Ms** for each older adult in your care

Act on

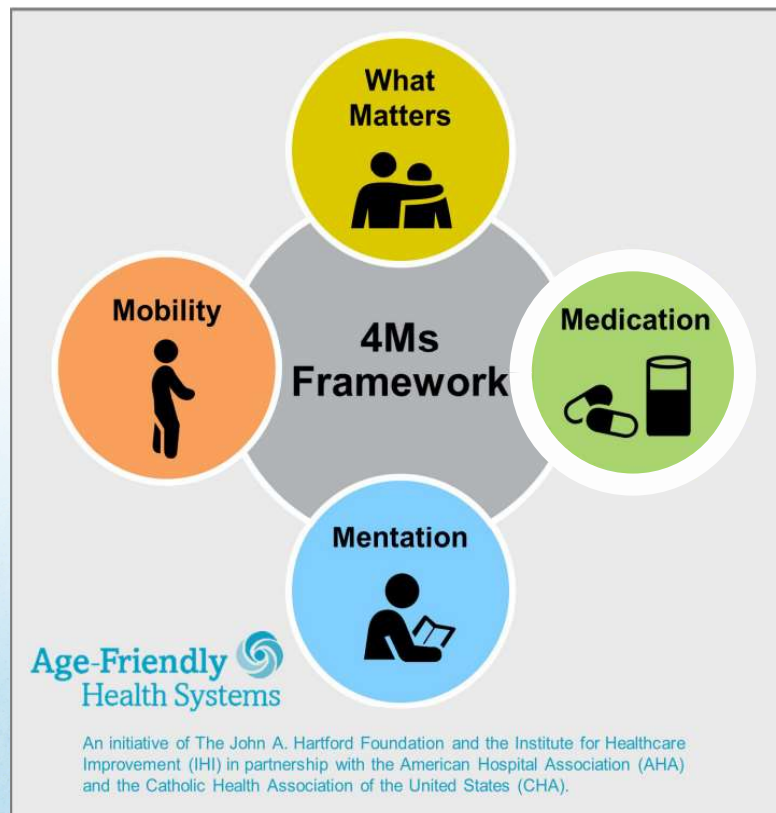

Incorporate the **4Ms** into care delivery and document in the care plan

Domain 1 Eliciting Patient Healthcare Goals

Know and align care with each older adult's health outcome goals and care preferences...
not limited to end-of-life care

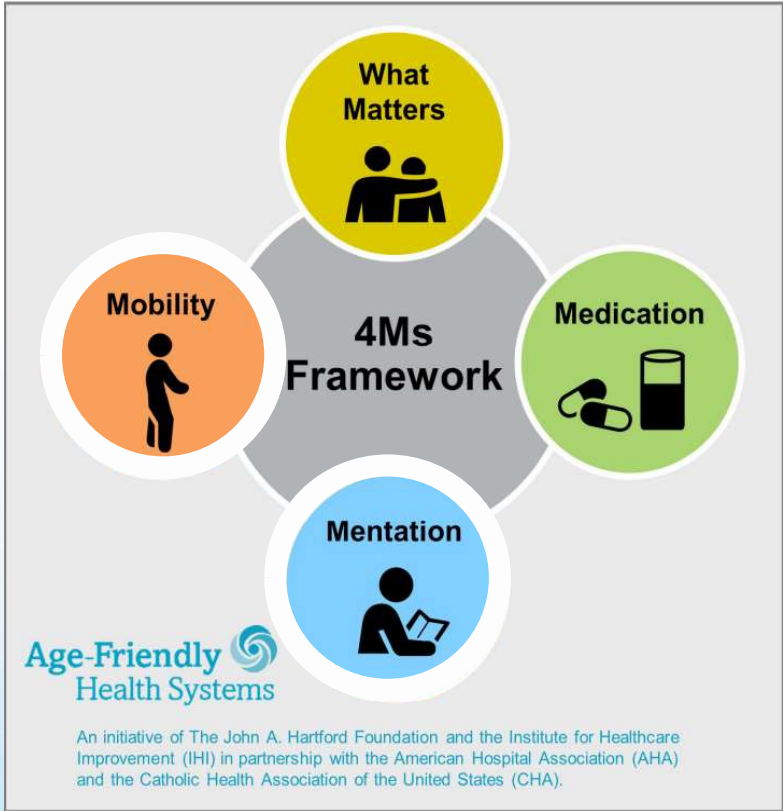

Domain 2 Responsible Medication Management

If necessary, use medication that does not interfere with **What Matters, Mobility, or Mentation**

Domain 3
Frailty Screening
& Intervention

Frailty

An increased risk of poor outcomes due to physiologic vulnerability to stress

Clinical Frailty Scale

 <p>1 Very Fit – People who are robust, active, energetic and motivated. These people commonly exercise regularly. They are among the fittest for their age.</p>	 <p>7 Severely Frail – Completely dependent for personal care, from whatever cause (physical or cognitive). Even so, they seem stable and not at high risk of dying (within ~ 6 months).</p>
 <p>2 Well – People who have no active disease symptoms but are less fit than category 1. Often, they exercise or are very active occasionally, e.g. seasonally.</p>	 <p>8 Very Severely Frail – Completely dependent, approaching the end of life. Typically, they could not recover even from a minor illness.</p>
 <p>3 Managing Well – People whose medical problems are well controlled, but are not regularly active beyond routine walking.</p>	 <p>9 Terminally Ill – Approaching the end of life. This category applies to people with a life expectancy <6 months, who are not otherwise evidently frail.</p>
 <p>4 Vulnerable – While not dependent on others for daily help, often symptoms limit activities. A common complaint is being “slowed up”; and/or being tired during the day.</p>	
 <p>5 Mildly Frail – These people often have more evident slowing, and need help in high order IADLs (finances, transportation, heavy housework, medications). Typically, mild frailty progressively impairs shopping and walking outside alone, meal preparation and housework.</p>	<p>Scoring frailty in people with dementia</p> <p>The degree of frailty corresponds to the degree of dementia. Common symptoms in mild dementia include forgetting the details of a recent event, though still remembering the event itself, repeating the same question/story and social withdrawal.</p> <p>In moderate dementia, recent memory is very impaired, even though they seemingly can remember their past life events well. They can do personal care with prompting.</p> <p>In severe dementia, they cannot do personal care without help.</p>
 <p>6 Moderately Frail – People need help with all outside activities and with keeping house. Inside, they often have problems with stairs and need help with bathing and might need minimal assistance (cuing, standby) with dressing.</p>

Age-Friendly
Health Systems

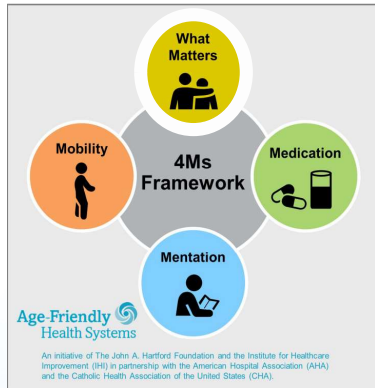

An initiative of The John A. Hartford Foundation and the Institute for Healthcare Improvement (IHI) in partnership with the American Hospital Association (AHA) and the Catholic Health Association of the United States (CHA).

Domain 1: Eliciting Patient Healthcare Goals

Obtain patients' health-related goals and treatment preferences which will inform shared decision making and goal-concordant care.

Domain 1: Attestation Statement A

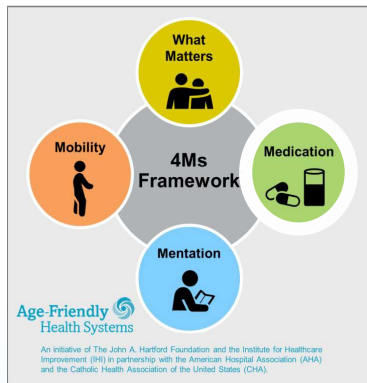

A) Established protocols are in place to ensure patient healthcare goals are obtained, reviewed and documented in the medical record

- Health goals
- Treatment goals
- Living wills
- Identification proxies
- Advance care planning (ACP)

These goals are updated...

- ✓ Before major procedures and...
- ✓ Upon significant changes in clinical status

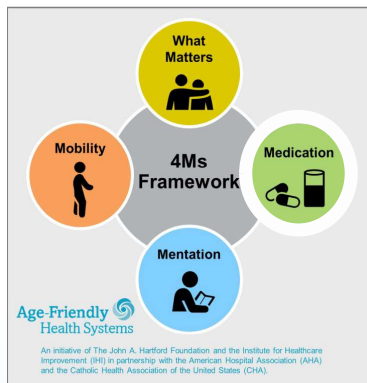

Domain 2: Responsible Medication Management

- Optimize medication management through monitoring of the pharmacological record for drugs that may be inappropriate in older adults due to increased risk of harm

Potentially Inappropriate Medications (PIMs)

Domain 2: Attestation Statement A

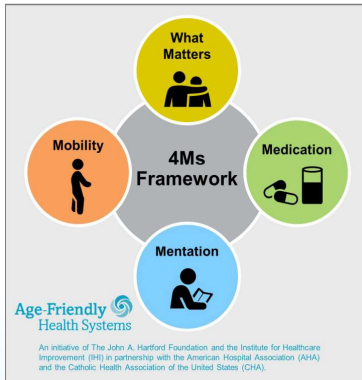

- A) Meds are reviewed for the purpose of identifying PIMs for older adults as defined by standard evidence-based guidelines, criteria, or protocols

PIMs should be considered for:

- discontinuation and/or
 - dose adjustment
-
- ✓ upon admission,
 - ✓ before major procedures, and/or...
 - ✓ upon significant changes in clinical status

Per IHI

If necessary, use medication that does not interfere with **What Matters, Mobility, or Mentation**

- Benzodiazepines
- Opioids
- Highly anticholinergic meds
 - example: Benadryl
- All sedatives & sleep med (Rx & OTC)
 - example: Tylenol PM
- Muscle relaxants
- Tricyclic antidepressants
- Antipsychotics
- Mood Stabilizers

PIMs

Domain 3: Frailty Screening & Intervention

Screen patients for geriatric issues related to frailty for the purpose of early detection and intervention where appropriate, including...

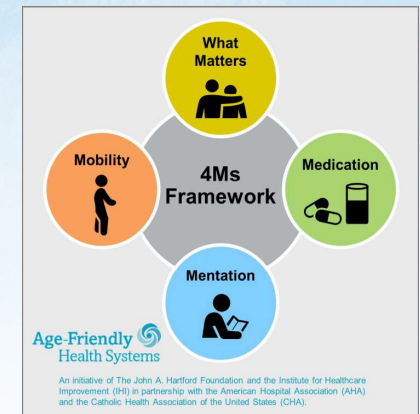

- cognitive impairment / delirium,
- physical function / mobility, and...
- malnutrition

Domain 3: Frailty Attestation Statement A

A) Patients are screened for risks regarding mentation, mobility, and malnutrition using validated instruments ideally...

- ✓ upon admission
- ✓ before major procedures
- ✓ and/or upon significant changes in clinical status

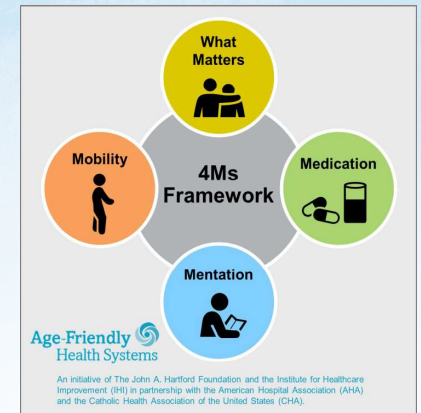

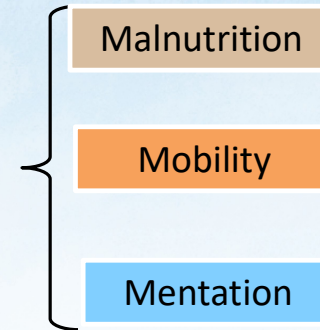

Domain 3: Frailty Attestation Statement B

B) Positive screens result in management plans including but not limited to...

- minimizing **delirium** risks,
- encouraging **early mobility**, and
- implementing **nutrition** plans where appropriate

These plans should be:

- ✓ included in discharge instructions and
- ✓ communicated to post-discharge facilities

Domain 3: Frailty Attestation Statement C

C) Data are collected on rate of...

- falls,
- HAPIs (pressure ulcers*), and...
- 30-day readmissions
- for patients ≥ 65
- Data are stratified by demographic and/or social factors

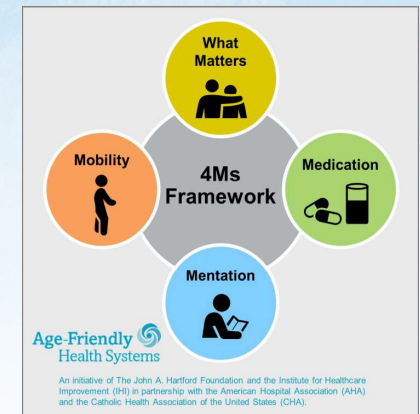

*The Federal Register uses the term decubitus ulcers

Domain 3: Frailty Attestation Statement D

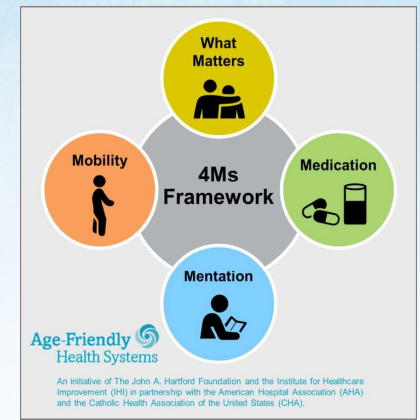

D) Protocols exist to reduce the risk of ED delirium by reducing length of ED stay with a goal of transferring a targeted percentage of older patients out of the ED within...

- 8 hours of arrival and/or...
- 3 hours of decision to admit

Domain 4: Social Vulnerability

Ensure hospitals recognize the importance of social vulnerability screening of older adults and have systems in place to ensure that social issues are identified and addressed as part of the care plan.

Domain 4: Attestation Statement A

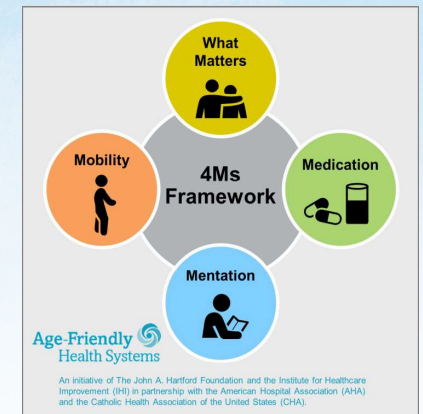

A) Older adults are screened for geriatric specific social vulnerability to identify those who may benefit from care plan modification

including...

- social isolation,
- economic insecurity,
- limited access to healthcare,
- caregiver stress, and...
- elder abuse

The assessments are performed:

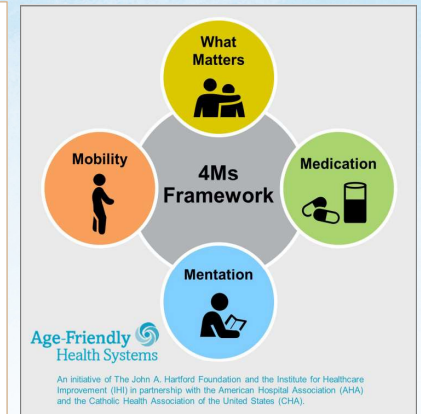

- ✓ on admission
- ✓ and again prior to discharge

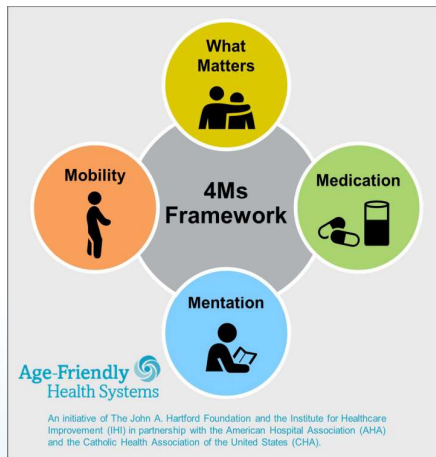

Domain 4: Attestation Statement B

B) Positive screens for social vulnerability are addressed through intervention strategies.

- ✓ These strategies should include:
 - ✓ appropriate referrals and
 - ✓ resources for patients upon discharge
- ✓ including those that identify patients **at risk of mistreatment**

Domain 5: Age-Friendly Care Leadership

- Ensure consistent quality of care for older adults through identification of an **age friendly champion and/or interprofessional committee** tasked with ensuring compliance with all components of this measure.

Age Friendly **Champion**
and / or
Age Friendly Interprofessional **Committee**

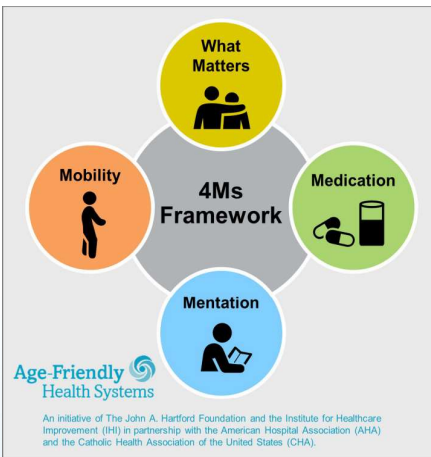

Domain 5: Leadership Attestation Statement A

A) Our hospital designates a point person and/or interprofessional committee to specifically ensure age friendly care issues are prioritized, including those within this measure.

- This individual or committee oversees such things as:
 - quality related to older patients,
 - identifies opportunities to provide education to staff, and...
 - update hospital leadership on needs related to providing age friendly care

Domain 5: Leadership Attestation Statement B

B) Our hospital compiles quality data related to the Age Friendly Hospital measure.

- These data are stratified by demographic and/or social factors and...
- should be used to drive improvement cycles
